

PASS[®]

Custom Residential Wiring System

"Your Gateway to Information, Communications and Entertainment"

The PASS[®] System

PASS is a comprehensive residential wiring system that sets **quality standards** for your home's low voltage wiring infrastructure, or "information highway". It is the **most comprehensive wiring plan** currently available for new residential construction.

Custom Media Panel

The PASS system starts with the **custom media panel**, the centralized tiepoint for your incoming services (internet, phone, cable, satellite etc.). Inside the media panel, distribution modules process these signals and route them to the PASS media outlets within your various rooms.

High Performance Cabling

The speed and capacity demands of today's consumer electronics products quickly stress inferior cabling systems. The PASS system specifies that only the highest bandwidth cabling be installed into your new home. This assures you of maximum capability today and tremendous flexibility well into tomorrow.

Premium Connectors

The performance level of PASS is most evident in the premium connectors that are employed throughout the system. All PASS connections are of the highest quality and are carefully tested to assure your long term satisfaction. Reliability is built into the PASS system, not added on later!

PASS systems are fully expandable to every room in your home

Move into the PASS[®] lane!

Connect ... High Speed Internet / Computer

Analog & Digital Phone Systems

...Digital or Analog Telephone / Fax

... Digital Cable / Satellite TV
